

Humic Granules

These granules are natural soil conditioner that acts as an organic chelator or microbial inhabitator. Humic have a unique carbon matrix which includes a high concentration of trace minerals and organic acids, it enhances the plant's ability to take in essential nutrients, and improves soil structure.

Picture	Parameters	Specifications
	Appearance	Black Round Granules
	Available Size (in ASTM)	05-08 ASTM (4mm to 2.36mm)
	Humic	2-10 % (As per customized requirement)
	Available Packaging	25 kg bags
	Minimum Order Qty:	Truck Load
	Biologically Active Components	Humic Acid, Fulvic Acid, Humin

Features:

- Organic Product
- Biodegradable
- Soil Conditioner
- Natural Chelate
- Dust free
- Spherical Granules

Functions:

- Increases soil carbon content.
- Stimulates beneficial microorganisms
- Upon contact with water, granule disperses into thousands of micro particles, which move directly into the root zone and began working to improve the health and quality of your turf, crop or plant
- Improves germination and viability of seeds
- Chelates macro and micro nutrients making them available to the plant for longer periods of time, also enhances the plant's ability to take in essential nutrients.
- Increases cation exchange capacity (CEC)
- Improves soil structure for better aeration and water movement
- Blendable: These granules can be blended with most fertilizer components.

Note: Ingredients & Concentration can be Customized.
