

## Potash Mobilizing Biofertilizers (KMB)

***A truly sustainable plant nutrition solution.***

This product contains beneficial bacteria which is able to mobilize native and applied potash in the soil. It is aerobic and free living plant growth promoting bacteria. It works well in all soil types and helps to increase crop yield in normal and low potash soil.

**Bio-efficiency:** Mobilize and solubilizes potash and makes it available to plants, improves fruit setting, quality and weight.

**Suitable for All crops.**

Picture	Parameters	Powder	Granules	Liquid
	Appearance	White Fine Powder	Black Granules	Pale Yellow
	Odour	Odourless	Odourless	Mild offensive
	pH	-	-	6.5-7
	Solubility	Insoluble in H <sub>2</sub> O	Insoluble in H <sub>2</sub> O	Soluble in H <sub>2</sub> O
	Origin	Bacteria Isolated from soil	Bacteria Isolated from soil	Bacteria Isolated from soil
	Available Packing	1 kg	35 Kg	1 liter
	Minimum Order Qty	100 kg	10 MT	100 liter
	Shelf Life	1 Year	1 Year	1 Year

**Also Known As:** KSB, KMB Biofertilizer. Potash solubilizing bacteria (KSB).

### **Advantages:**

- Potash fixation and mobilization in the rhizosphere and soil.
- This microbe secretes various beneficial metabolites and growth promoters.
- This bacteria helps in average increase in yield due to available potash, which improves the fruit setting, quality and weight.

Note: We are bulk Manufacture of KSB, we provide customized formulation in liquid, powder and granular form.
